INDEX TO VOLUME XXXV.*

A

Aberration, constant of, A. Hall, 505.
Academy, National. Washington meeting, 424.
Agassiz, A., Three Cruises of the Blake, 495; notice of Bibliotheca Zoologica, 420.
Aitkin, dust particles in the air, 413.
Alps, see GEOLOGY.
American Anthropologist, 425; Geologist, 84.
Auxanometer and clinostat, Albrecht, 258.

B

Barker, G. F., chemical notices, 73, 248, 334, 410, 492.
Barus, C., viscosity of gases at high temperatures, 407.
Bayley, W. S., spotted rocks from Minn., 388.
Beecher, C. E., notice of Hall's Paleontology of New York, vol. vii, 499.
Bell, L., absolute wave-length of light, 265, 347.
Bibliotheca Zoologica, Chun and Leuckart, 420; Taschenberg, 505.
Biddle, H. J., surface geology of southern Oregon, 475.
Bolometer, theory of, Reid, 160.
BOTANY—Flora of Hawaiian Is., Hillebrand, 501. Garden and Forest of C. S. Sargent, 420. Plants, respiratory organs of, Jost, 258. Die natürlichen Pflanzenfamilien, Engler und Prantl, 259. Das pflanzenphysiologische Praktikum, Detmer, 87. Vegetable cell, recent knowledge of, 341, (Zimmermann), 419, (Loew and Bokorky); histology, recent advances in, 503. See further under GEOLOGY.
Branner, J. C., Geology of Ark., 1887, 264.
Brown, J. A., Palæolithic Man in Northwest Middlesex, 255.

C

Chamberlin, T. C., the term Agnotozoic, 254.
Chemical literature, indexing of, 76.
CHEMICAL WORKS NOTICED—Analytical Chemistry, Muter, 251. Inorganic Chemistry, Richter, 251. Organic Analysis, Prescott, 336.
CHEMISTRY—Acid, selenous, constitution of, Michaelis and Landmann, 76. Apantlesis, Mallet, 249. Calcium and copper, double acetate of, Rüdorff, 411. Chloride, stannous, boiling point of, Bilitz and Meyer, 410. Chlorine, in oxygen from potassium chlorate, 335. Decomposition by pressure, Spring, 493. Ferric chloride, vapor density, Meyer, 494. Fluorine, properties of, Moissan, 249. Germanium in euxenite, Krüss, 410. Halogen hydrides, decomposition of, Richardson, 73. Hydrogen chloride, decomposition of, Armstrong, 74. Magnesium and zinc, Hirn, 414. Molecules, size of, 492. Oxygen carriers, Lothar Meyer, 250; per centage of, in air, Hempel, 76. Potassium, wave-length of two red lines of, 413. Solutions, concentration of, by gravity, Gouy and Chaperon, 75. Stalagmometer, Traube, 248. Water, integral weight of, Hunt, 411. Zinc and sulphuric acid, interaction of, 335; atomic weight, Reynolds and Ramsay, 250.
Chun, C., Bibliotheca Zoologica, 420.
Clark, W. B., new ammonite from Alpine Rhætic, 118.
Clarke, F. W., new meteorites, 264; nickel ores from Oregon, 483.
Coast Survey, cruises of the "Blake," 495.
Colorado Scientific Society, proceedings, 88.
Copper, electrolysis of, and electric currents, 337.
Crew, H., rotation of the sun, 151.

D

Dagincourt, Annuaire Géologique, 415.
Dana, E. S., crystalline form of polianite, 243.
Dana, J. D., Asa Gray, 181; changes in Mt. Loa craters: Pt. I. Kilauea, 15, 213, 282; Cape Horn Geology, 83.
Darwin, G. H., see Davison, C.
Davison, C., earth contraction and mountain making, 338.
Davis, W. M., notice of Hann's meteorological atlas, 263.
Day, D. T., Mineral Resources of U. S., 257.

*This Index contains the general heads BOTANY, CHEMISTRY, GEOLOGY, MINERALS, OBITUARY, ZOOLOGY, and under each the titles of Articles referring thereto are mentioned.

Detmer, Das pflanzenphysiologische Praktikum, 87.
Dieterici, mechanical equivalent of heat, 77.
Döderlein, Die japanische Seeigel, 505.
Dutton, C. E., speed of propagation of Charleston earthquake, 1.

E

Eakins, L. G., on xanthitane, 418.
Earthquake, Charleston, Newcomb and Dutton, 1; intensity in San Francisco, 427; observations of, 97.
Ehlers, E., Report on Annelids, 424.
Electrometer, calibration of, Shea, 204; capillary, Pratt, 143.
Emmons, S. F., Geology and Mining Industry of Leadville, Col., 84.
Engler, A., Die natürlichen Pflanzenfamilien, 259.

F

Fewkes, J. W., deep-sea Medusæ, 166.
Flight, W., History of Meteorites, 87.
Force, measurement of, by gravitation, 253.
Forces, electromotive, measurement of, 252.
Fossil, see GEOLOGY.
Franklin, W. S., electromotive force of magnetization, 290.

G

Gas, natural, 258.
Gases, explosion of, 413; viscosity of, at high temperatures, Barus, 407.
Gee, W. W. H., Elementary Practical Physics, vol. ii, 79; Practical Physics, 336.
Geological Annual, Dagincourt, 415; Evidences of Evolution, Heilprin, 256; Record, 1879, 416.
GEOLOGICAL REPORTS AND SURVEYS—Arkansas, 1887, 255, 264; Minnesota, 1886, 84, 1887, 500; New York, Hall, 85, 499; Pennsylvania, 1886, 85, 415; Rhode Island, 415.
GEOLOGY—
Agnotozoic, Chamberlain, 254.
Alps, Swiss, geological history of, 80.
Ammonite, new, from Alpine Rhætic, 118.
Atlantic Slope, middle, three formations of, McGee, 120, 328, 367, 448.
Building Stone in N. Y., Smock, 500.
Cape Horn geology, Belemnites, 83.
Carboniferous trilobites, Vogdes, 500.
Corals and Bryozoa, Hall, 85.
Cortlandt rocks, G. H. Williams, 438.
Cretaceous fossils, Brazil, White, 255.
Desmostylus, Marsh, 95.
Devonian system, N. America, 51.
Dinosaurs, new, Potomac formation, Marsh, 89.
Dislocations of earth's crust, 500.
Dust particles in atmosphere, 413.
Earth, diatomaceous, Nebraska, 86.
Elements of Geology, Gümbel, 341.
Fossil fishes, new, Newberry, 498.
GEOLOGY—
Fossil Mammalia, British museum, Lydekker, 256.
Fossil Plants of Coal Measures, Williamson, 256.
Fossils of Littleton, N. H., Pumpelly, 79; Hitchcock, 255.
Geologie, Hyades, 83.
des Münsterthals, Schmidt, 346.
Geologist, American, new monthly, 84.
Geology, vol. ii, Prestwich, 414.
and Mining Industry, Leadville, Col., Emmons, 84.
Gümbel's Elements, 341.
Lake Agassiz, upper beaches of, Upham, 86.
Laramie group, relation to earlier and later formations, White, 432.
Lavas of Krakatoa, 341.
Mammals, fossil, White River formation, 85.
Metamorphism, gradual variation in intensity, 82.
Metamorphic rocks of Alps, fossils in, 80.
Moraines, terminal, Germany, 401.
Mountain making, 338, 415.
Oregon, surface geology of, 475.
Palæolithic Man in Northwest Middlesex, Brown, 255.
Paleontology, New York, Hall, 85, 499.
Pleurocœlus, Marsh, 90.
Roth's Geology (German), 257.
Sauropoda, new genus, Marsh, 89.
Sirenian, new fossil, from Cal., Marsh, 94.
Taconic of Emmons, Walcott, 229, 307, 394.
Gerland, G., Beiträge zur Geophysik, 344.
Gibbs, J. W., elastic and electrical theories of light, 467.
Glow, residual, spectrum of, 334.
Goldschmidt Index der Krystallformen der Mineralien, etc., 501.
Goodale, G. L., botanical notices, 87, 258, 341, 419, 501.
Gravitation, 414.
Gray, A., botanical necrology, 1887, 260.
Obituary notice of, 181.
Groth, P., Grundriss der Edelsteinkunde, 86.
Gümbel, K. W. von, Geologie von Bayern, 341.

H

Hall, A., constant of aberration, 505.
Hall, J., New York Paleontology, vol. vi, 85; vol. vii, 499.
Hann, Meteorological Atlas, 263.
Hastings, C. S., law of double refraction in Iceland spar, 60.
Heat measurer, new, 251; mechanical equivalent of, 77.
Heilprin, A., Geological Evidences of Evolution, 256.
Heim, Les Dislocations de l'ecorce terrestre, etc., 500.

Hicks, L. E., diatom earth in Nebraska, 86.
Hillebrand, W., Flora of Hawaiian Islands, 501.
Hillebrand, W. F., minerals from Utah, 298.
Holden, E. S., earthquake-intensity in San Francisco, 427.
Hoffmann, G. C., Platinum in Canada, 257.
Huntington, O. W., Catalogue of Meteorites, 86.
Hyades, Mission Scientifique du Cap Horn, 83.

K

Keep, J., West Coast Shells, 264.
Kemp, J. F., diorite dike, Orange Co., N. Y., 331.
Kirkwood, D., the asteroids, 345.

L

Leuckart, R., Bibliotheca Zoologica, 420.
Light absolute wave-length of, Bell, 265, 347; elastic and electrical theories of, Gibbs, 467; influence of, upon electrical discharges, 337; penetration in water, 495; wave-length and intensity of, 78; standard wave-lengths of, 337.
Lockyer, J. N., Movements of the Earth, 346.
Lydekker, R., Fossil Mammalia, British Museum; Pt. v, 256.

M

Magnetism, influence on bismuth, 252; of gases, 495.
Magnetization, electromotive force of, 290.
Mallet, F. R., Mineralogy of India, 416.
Margarie, de, Les dislocations de l'écorce terrestre, 500.
Marks, W. D., Relative Proportions in Steam Engine, 88.
Marsh, O. C., new fossil Sirenian, 94; new genus of Sauropoda and other new Dinosaurs from Potomac formation, 89.
McGee, W. J., three formations of Middle Atlantic slope, 120, 328, 367, 448.
Mendenhall, T. C., seismological investigations, 97.
Merrill, G. P., enlargement of augite in peridotite, 488; new meteorite, 490.
Metamorphism, variation in intensity of, 82.
Meteorite, San Bernardino Co., California, Merrill, 490; Japan, Clarke, 264; so-called of Northford, Maine, Robinson, 212.
Meteorites, Catalogue of, Huntington, 86; History of, Flight, 87.
Meteorological Atlas, Hann, 263.
Middlemiss, metamorphic rocks of the Himalayas, 82.
Microscope, new petrographic, 114.
Mineral Resources of U. S., 257.
Mineral Collection, Shepard's, 258.
Mineralogy of India, Mallet, 416.
Minerals—Augite, enlargement of, 488. Arseniopleite, analysis, 416. Barkevikite, 416. Barysil, anal., 417. Brochantite, 306. Belonesite, 417. Bementite, anal., 417. Calciothorite, 416. Chalcophyllite, 303. Chrysolite, anal., 485. Clinoclasite, anal., 303. Cryphiolite, anal., 417. Cryptolite, 86. Diamonds, supposed, in meteorite, 86. Dihydro-thenardite, 418. Erinite, anal., 299. Euxenite containing germanium, 410. Fiedlerite, 418. Genthite, Oregon, 483. Iceland spar, refraction in, 60; solubility, 411. Laubanite, 418. Laurionite, 418. Martinite, anal., 418. Melanocerite, 416. Metalonchidite, 418. Mixite (?), anal., 305. Nickel ores from Oregon, 483. Nordenskiöldine, 416. Olivenite, 298. Platinum, native, Canada, 257. Polianite, form of, 243. Rosenbuschite, 416. Tourmaline, analysis and composition of, 35. Tyrolite (?), 300. Xanthitane, anal., 418.
Molecules, size of, Jäger, 492.
Muter, J., Analytical Chemistry, 251.

N

Newberry, J. S., new fossil fishes, 498.
Newcomb, S., speed of propagation of Charleston earthquake, 1.
Nichols, E. L., electromotive force of magnetization, 290.

O

Obituary—Booth, James C., 346; Boott, William, 262; Goldie, John, 260; Gray, Asa, 181; Harger, Oscar, 425; Hayden, Ferdinand V., 88, 179; Kellogg, Albert, 261, Michener, Ezra, 263; Planchon, Jules-Émile, 425; Rath, Gerhard vom, 506; Ravenel, Henry William, 263; Tolmie, W. E., 260.
Observatory, Argentine, observations of, 346; Harvard, annals of, 346; Lick, publications of, 346.

P

Panebianco, R., Rivista Min. Crist. Italiana, vol. i, 86.
Peck, W. G., Analytical Mechanics, 346.
Planets, discovery of small, 505.
Penfield, S. L., polianite, 243.
Peters, E. D., Modern American Methods of Copper Smelting, 88.
Planets, discovery of small, 505.
Power, transmission of, by alternating electrical currents, 252.
Prantl, K., Die natürlichen Pflanzenfamilien, 259.
Pratt, J. H., Jr., capillary electrometer, 143.
Prescott, A. B., Organic Analysis, 336.
Prestwich, J., Geology, vol. ii, 414.
Probst, J., Klima und Gestaltung der Erdoberfläche in ihrer Wechselwirkung, 345.
Pumpelly, R., fossils of Littleton, N. H., 79.

R

Radiation in absolute measure, 77.
Reade, T. M., mountain making, 415.
Reflection and refraction, apparatus to illustrate, 332.
Refraction, double, in Iceland spar, Hastings, 60; on electrical theory, Gibbs, 467.
Reid, H. F., theory of the bolometer, 160.
Renevier, on fossils in the Alps, 80.
Richter, V. von. Inorganic Chemistry, 251.
Riggs, R. B., composition of tourmaline, 35.
Robinson, F. C., supposed meteorite of Northford, Me., 212
Rolleston, Forms of Animal Life, 504.
Roth, J., Allgemeine und chemische Geologie, 257.
ROCKS—Diorite dike, N. Y., Kemp, 331. Diorites, "Cortlandt Series," N. Y., Williams, 438. Gabbros, "Cortlandt Series," N. Y., Williams, 438. Peridotite, augites in, Merrill, 488. Quartzites, spotted, from Minn., Bayley, 388.
Rucker, velocity of sound, 252.

S

Salisbury, R. D., terminal moraines in Germany, 401.
Schmidt, A., Géologie des Münsterthals, 346.
Seismological investigations, 97.
Shea, D. W., calibration of an electrometer, 204.
Smith, S. I., obituary notice of O. Harger, 425.
Solids, flow of, 78.
Sound, velocity of, 252, 495.
Spectra, absorption, 412; coincidences between lines of different, 252; influence of light-producing layers upon, 253.
Spectrum analysis, use of interference fringes, 495; solar, light intensity in, 77.
Spring, W., criticism of Hallock on flow of solids, 78.
Stalagmometer and quantitative analysis, 248.
Steen, A. S., Beobachtungs-Ergebnisse der norwegischen Polarstation Bossekop in Alten, 345.
Stevens, W. L., apparatus for demonstration of reflection and refraction, 332.
Stewart, B., Elementary Practical Physics, vol. ii, 79; Practical Physics, 336.
Sun, rotation of, Crew, 151.

T

Temperature, influence of, on magnetization, 253.
Trowbridge, J., physical notices, 77, 251, 337, 412, 495.

U

Upham, W., upper beaches and deltas of Lake Agassiz, 86.

V

Viscosity, pyrometric use of, Barus, 407.
VOLCANO—Kilauea, Dana, 15, 213, 282; Emerson, 257.

W

Walcott, C. D., Taconic of Emmons, 229, 307, 394.
Waldo, C. A., Descriptive Geometry, 345.
Ward, L. F., notice of W. C. Williamson on fossil plants, 256.
Washington, H. S., minerals from Utah, 298.
Water, spectrum of, 337.
Weber, instrument for measuring heat, 251.
White, C. A., contributions to Paleontology of Brazil, 255; relation of Laramie group to earlier and later formations, 432.
Williams, G. H., gabbros and diorites of "Cortlandt Series," near Peekskill, N. Y., 438; petrographical microscope, 114.
Williams, H. S., Devonian system in N. America, 51.
Williamson, W. C., Fossil Plants of Coal Measures; Pt. xiii, 256.

Z

Zoological Bibliotheca, Chun and Leuckart, 420; Taschenberg, 505.
ZOOLOGY—
Annelids, Ehlers, 424.
Forms of Animal Life, Rolleston, 504.
Japanische Seeigel, Döderlein, 505.
Medusæ, deep-sea Fewkes, 166.
West Coast Shells, Keep, 264.
See further under GEOLOGY.
